Clinical Significance

Individual Diagnosis

I. [WBC]

1. [WBC>16.76] It is common in cases of inflammation, blood diseases, malignant tumors, stress, infections (viral, bacterial, parasitic, etc.), tissue necrosis, poisoning, etc.
2. [NEU#>11.64] It is common in cases of bacterial infections, poisoning, post-operation, stress, acute inflammation, chronic inflammatory bleeding/hemolysis, etc.
3. [NST#>0.8] It indicates that the neutrophil nucleus has shifted to the left.
4. [NSG#>11.30] It indicates that the neutrophil nucleus has shifted to the right. It is common in cases of infectious inflammation, poisoning, post-operation, stress hemogram, etc.
5. [MON#>1.12] It is common in cases of stress, acute (late stage infections) and chronic inflammation, recovery from disease, suppurative inflammation, use of glucocorticoid drugs, etc.

II. [RBC]

1. [RBC<5.65] It is common in cases of infections, acute/chronic hemorrhagic anemia, hemolytic anemia, deficiency anemia, aplastic anemia, etc.
2. [HGB<131] It is common in cases of infections, severe hypochromic anemia, acute/chronic hemorrhagic anemia, hemolytic anemia, deficiency anemia, aplastic anemia, etc.

III. [PLT]

1. [MPV>13.20] It is common in cases of reactive thrombopoiesis, secondary platelet destruction, myeloproliferative disorders, hyperthyroidism, etc.

Combined Diagnosis

1. [RBC<5.65HGB<131] It indicates a normocytic anemia, which is common in cases of aplastic anemia, acute blood loss within 40 h, hemolysis within 40 h, decreased hematopoiesis, leukemia, etc.
2. [WBC>16.76NST#>0.8NSG#>11.3] It indicates an acute inflammation, which is common in cases of localized/systemic acute/suppurative diseases (e.g., nephritis, uterine inflammation, pyometra, pleurisy, pneumonia, endocarditis, leptospirosis, and severe pyoderma).
