Clinical Significance

Individual Diagnosis

I. [RBC]

1. [MCHC>358] Such increase is common in cases of immune-mediated anemia and hemolysis

II. [PLT]

1. [PLT<151] It is commonly seen in sample agglutination, bleeding, platelet destruction, organ sequestration, inadequate bone marrow production, drug-induced situations, etc.
2. [MPV<11.4] It is common in cases of early immune-mediated thrombocytopenia and bone marrow failure.
3. [PCT<0.17] It indicates a decrease in platelets.
4. [APLT#>0.15] It is indicated that the sample has coagulated and there is azotemia, which is commonly seen in immune - mediated thrombocytopenia, infectious diseases, malignant tumors, heart diseases, drug - induced disorders, etc.
