

PHÒNG KHÁM THÚ Y SUNVET

Test Report of Feces Morphological Analysis

Pet Name: Loc
Gender: Male
Case No.:

Owner Tel.:
Species: Feline
Test Time: 2025-10-11 10:59

Owner Name:
Age:

Texture: Formed stool

Color: Tan

Test Results

Test Report of Feces Morphological Analysis

Pet Name: Loc

Case No.:

Test Time: 2025-10-11 10:59

AF

40µm

Concentration: 2.46 /HPF

Clinical Significance

Individual Diagnosis

1. [Tan] Fecal color appears normal.
2. [Formed stool] Fecal consistency is within normal physiological range.
3. [TRI#>0] Indicates the pet may be infected with Giardia.
4. [C/B>0.15] Commonly seen in cases of intestinal dysbiosis caused by illness or antibiotic use disrupting gut flora balance.
5. [AF#>0.10] Common when pets consume large amounts of meat, have indigestion, increased intestinal motility, diarrhea, or decreased exocrine pancreatic function and trypsin secretion.

Combined Diagnosis

1. [COS#<145BACI#<510] Indicates sparse intestinal microbiota structure, commonly seen in cases of severe watery diarrhea or post-antibiotic treatment. Clinical diagnosis should be combined with the pet's symptoms.
