

PHÒNG KHÁM THÚ Y SUNVET

Test Report of Feces Morphological Analysis

Pet Name: Bong
Gender: Female
Case No.:

Owner Tel.:
Species: Feline
Test Time: 2025-10-13 12:07

Owner Name:
Age:

Texture: Watery stool

Color: Others

Test Results

Test Item		Test Result	Reference Range	Negative	Positive
01 Parasite eggs	ALE#	0.0	0.00-0.00 /LPF	-

Concentration: 1.21 /HPF

WBC

—15µm—

Concentration: 0.02 /HPF

AF

—40µm—

Concentration: 2.41 /HPF

Clinical Significance

Individual Diagnosis

- [Watery stool] Common when intestinal mucus secretion is excessive and motility is rapid, often due to infectious or non-infectious diarrhea, especially acute gastroenteritis.
- [TRI#>0] Indicates the pet may be infected with Giardia.
- [AF#>0.10] Common when pets consume large amounts of meat, have indigestion, increased intestinal motility, diarrhea, or decreased exocrine pancreatic function and trypsin secretion.

Combined Diagnosis

- [COS#<145BACI#<510] Indicates sparse intestinal microbiota structure, commonly seen in cases of severe watery diarrhea or post-antibiotic treatment. Clinical diagnosis should be combined with the pet's symptoms.
- [TRI#<6TRI#>0] Suspected Tritrichomonas infection with low detected quantity. Manual microscopic examination is recommended for confirmation.
