

PHÒNG KHÁM THÚ Y SUNVET

Test Report of Feces Morphological Analysis

Pet Name: Cop Xe
Gender: Male
Case No.:

Owner Tel.:
Species: Feline
Test Time: 2025-09-28 16:59

Owner Name:
Age:

Texture: Watery stool

Color: Others

WBC

15µm

Concentration: 0.25 /HPF

AF

40µm

Concentration: 0.36 /HPF

Clinical Significance

Individual Diagnosis

- [Watery stool] Common when intestinal mucus secretion is excessive and motility is rapid, often due to infectious or non-infectious diarrhea, especially acute gastroenteritis.
- [AF#>0.10] Common when pets consume large amounts of meat, have indigestion, increased intestinal motility, diarrhea, or decreased exocrine pancreatic function and trypsin secretion.

Combined Diagnosis

- [COS#<145BACI#<510] Indicates sparse intestinal microbiota structure, commonly seen in cases of severe watery diarrhea or post-antibiotic treatment. Clinical diagnosis should be combined with the pet's symptoms.
