Clinical Significance

Individual Diagnosis

1. [Tan] Fecal color appears normal.
2. [Soft stool] Common when excessive mucus is produced by the intestinal lining, with increased motility, infection/inflammation, or food intolerance.
3. [CEE#>0] Indicates the pet may be infected with tapeworms.
4. [SPI#>0] Indicates the pet may be infected with Taenia tapeworms.
5. [TRI#>0] Indicates the pet may be infected with Giardia.
6. [C/B>0.15] Commonly seen in cases of intestinal dysbiosis caused by illness or antibiotic use disrupting gut flora balance.
7. [AF#>0.10] Common when pets consume large amounts of meat, have indigestion, increased intestinal motility, diarrhea, or decreased exocrine pancreatic function and trypsin secretion.

Combined Diagnosis

1. [COS#<145BACI#<510] Indicates sparse intestinal microbiota structure, commonly seen in cases of severe watery diarrhea or post-antibiotic treatment. Clinical diagnosis should be combined with the pet's symptoms.
