Clinical Significance

Individual Diagnosis

I. [WBC]

1. [WBC>17.02] It is common in cases of inflammation, blood diseases, malignant tumors, stress, infections (viral, bacterial, parasitic, etc.), tissue necrosis, poisoning, etc.
2. [NEU#>10.29] It is common in cases of bacterial infections, poisoning, post-operation, stress, acute inflammation, chronic inflammatory bleeding/hemolysis, etc.
3. [NSG#>12.5] It indicates that the neutrophil nucleus has shifted to the right. It is common in cases of infectious inflammation, poisoning, post-operation, stress hemogram, etc.

II. [RBC]

1. [MCV<35.9] Such decrease is common in cases of microcytic anemia; e.g., iron deficiency, copper deficiency, uremia, and portacaval shunt.
2. [MCHC>358] Such increase is common in cases of immune-mediated anemia and hemolysis

III. [PLT]

1. [APLT#>0.15] It is indicated that the sample has coagulated and there is azotemia, which is commonly seen in immune - mediated thrombocytopenia, infectious diseases, malignant tumors, heart diseases, drug - induced disorders, etc.
