## Test Report of Feces Morphological Analysis

Pet Name: 3 mat  
Gender: Male  
Case No.:

Owner Tel.:  
Species: Feline  
Test Time: 2025-10-06 18:53

Owner Name:  
Age:

Texture: Watery stool

Color: Tan

### Test Results

## Test Report of Feces Morphological Analysis

Pet Name: 3 mat

Case No.:

Test Time: 2025-10-06 18:53

RBC

—15µm—

Concentration: 0.09 /HPF

WBC

—15µm—

Concentration: 0.11 /HPF

AF

—40µm—

Concentration: 0.32 /HPF

### Clinical Significance

#### Individual Diagnosis

1. [Tan] Fecal color appears normal.
2. [Watery stool] Common when intestinal mucus secretion is excessive and motility is rapid, often due to infectious or non-infectious diarrhea, especially acute gastroenteritis.
3. [AF#>0.10] Common when pets consume large amounts of meat, have indigestion, increased intestinal motility, diarrhea, or decreased exocrine pancreatic function and trypsin secretion.

#### Combined Diagnosis

1. [COS#<145BACI#<510] Indicates sparse intestinal microbiota structure, commonly seen in cases of severe watery diarrhea or post-antibiotic treatment. Clinical diagnosis should be combined with the pet's symptoms.
