

PHÒNG KHÁM THÚ Y SUNVET

Test Report of Feces Morphological Analysis

Pet Name: Lucy
Gender: Female
Case No.:

Owner Tel.:
Species: Canine
Test Time: 2025-11-27 15:42

Owner Name:
Age: 10Year4Month

Texture: Watery stool

Color: Red

Test Results

Test Item		Test Result	Reference Range	Negative	Positive
01 Parasite eggs	ALE#	0.0	0.00-0.00 /LPF	-

Test Report of Feces Morphological Analysis

Pet Name: Lucy

Case No.:

Test Time: 2025-11-27 15:42

WBC

15µm

Concentration: 31.52 /HPF

Clinical Significance

Individual Diagnosis

1. [Red] May indicate lower GI bleeding, or occur after ingesting specific foods like watermelon, red pepper, tomatoes, or dragon fruit.
2. [Watery stool] Common when intestinal mucus secretion is excessive and motility is rapid, often due to infectious or non-infectious diarrhea, especially acute gastroenteritis.
3. [C/B>0.15] Commonly seen in cases of intestinal dysbiosis caused by illness or antibiotic use disrupting gut flora balance.
4. [RBC#>1] Commonly seen with bleeding from specific areas like the colon, rectum, or anus.
5. [WBC#>1] Common in pets suffering from various types of enteritis (bacterial, allergic, viral, parasitic) or tumors.

Combined Diagnosis

1. [COS#<145BACI#<510] Indicates sparse intestinal microbiota structure, commonly seen in cases of severe watery diarrhea or post-antibiotic treatment. Clinical diagnosis should be combined with the pet's symptoms.
2. [Watery stoolRedWBC#>0] Commonly seen in cases of hemorrhagic enteritis.
