Diagnostic Recommendation

Single diagnosis:

1、【PLT】

1、【APLT#>0.15】 It is common in samples where micro-agglutination is not visible to the naked eye. Causes of sample agglutination: Sample agglutinations: ①Physiological platelet agglutination; ②Poor anticoagulation after sampling; ③Prolonged storage; in pathological conditions is common in below situations: such as immune-mediated thrombocytopenia, azotemia, infectious diseases, malignant tumours, heart disease, drug-induced disorders. Suggestions for next step testing: Investigate sample processing and human interference factors; If no abnormalities are confirmed in sample testing, proceed with differential diagnosis based on pathology.

Combined diagnosis:

1、【RBC<12.6、RBC>5.60、RET%>0.15%】 It is common in excitement-induced spleen contraction, blood loss, cardiovascular and pulmonary diseases, gastrointestinal diseases, inflammatory diseases, anti-inflammatory drugs, tumours, use of glucosamine, omega-3 fatty acids, etc.
