Clinical Significance

Individual Diagnosis

1. [Tan] Fecal color appears normal.
2. [Soft stool] Common when excessive mucus is produced by the intestinal lining, with increased motility, infection/inflammation, or food intolerance.
3. [C/B>0.15] Commonly seen in cases of intestinal dysbiosis caused by illness or antibiotic use disrupting gut flora balance.

Combined Diagnosis

1. [COS#<145BACI#<510] Indicates sparse intestinal microbiota structure, commonly seen in cases of severe watery diarrhea or post-antibiotic treatment. Clinical diagnosis should be combined with the pet's symptoms.
