

**PHÒNG KHÁM THÚ Y SUNVET**  
**Test Report of Feces Morphological Analysis**

**Pet Name:** Chip  
**Gender:** Female  
**Case No.:**

**Owner Tel.:**  
**Species:** Feline  
**Test Time:** 2025-12-03 15:55

**Owner Name:**  
**Age:** 6Month

**Texture:** Watery stool

**Color:** Tan

**PHÒNG KHÁM THÚ Y SUNVET**  
**Test Report of Feces Morphological Analysis**

Pet Name: Chip

Case No.:

Test Time: 2025-12-03 15:55

**Clinical Significance**

**Individual Diagnosis**

- [Tan] Fecal color appears normal.
- [Watery stool] Common when intestinal mucus secretion is excessive and motility is rapid, often due to infectious or non-infectious diarrhea, especially acute gastroenteritis.
- [AF#>0.10] Common when pets consume large amounts of meat, have indigestion, increased intestinal motility, diarrhea, or decreased exocrine pancreatic function and trypsin secretion.

**Combined Diagnosis**

- [COS#<145BACI#<510] Indicates sparse intestinal microbiota structure, commonly seen in cases of severe watery diarrhea or post-antibiotic treatment. Clinical diagnosis should be combined with the pet's symptoms.
