Remark

1.Because the specific cases of disease diagnosis are complex and individual, the report is for general reference only, not as a partial basis specific disease diagnosis.
2.If there is H behind result value, it indicates the test parameter is beyond the upper limit of normal range, If there is L behind result value, it indicates the test parameter is lower than the lower limit of the normal range.
3.If there is behind result value, it indicates the test parameter result is behind the upper limit of the instrument to calculate the range. If there is behind result value, it indicates the test parameter result is lower than the lower limit of instrument calculate range.

*The report is only responsible for the test sample, and the result is for doctors' reference only.
